Professional Summary

I'm a Software Engineer with over 10 years of hands-on experience in WEB development across next domains: e-Learning, e-Commerce / Marketplaces, Trading, Insurance and Health Care. I've contributed to projects in various delivery models - from out-staffing to startups - adapting quickly to diverse workflows, business goals, and team dynamics.

I've worked both independently and in teams of 3 to 20 engineers, often within international, distributed environments. English has been the primary language for communication, technical discussions, and client interaction, helping me align development work with business needs and enhance cross-team collaboration.

As a Full-Stack WEB Developer, I deliver solutions from Front-End interfaces to Back-End services and infrastructure. I'm experienced with monolithic and microservice architectures, REST / GraphQL APIs, databases like SQL (MySQL, SQLite and PostgreSQL) and MongoDB. I actively use Docker and implement CI / CD pipelines for automated deployment. Additionally, I use testing frameworks such as Playwright and Jest to ensure high code quality and reliability.

My responsibilities include project evaluation and planning, technical estimations, architecture design, and MVP scoping. I collaborate closely with stakeholders to define requirements, select appropriate technologies, and ensure maintainability. I also mentor junior developers, conduct code reviews, and support onboarding. I follow Agile/SCRUM methodologies to enable iterative delivery and maintain high team velocity.

Also I actively integrate AI-powered tools - such as automated code generation, intelligent testing frameworks, and performance optimization utilities - into my development workflows to boost productivity, reduce manual effort, and improve application scalability.

Professional Experience

Web Developer | Product / Startup, Omnora (fka SlidePresenter), Germany

April 2020 to Present

- Took part in building the portal that serves over 650 companies in the German market, delivering interactive content with seamless LMS integration.
- Contributed to the development of an enterprise-grade learning platform as part of a cross-functional team of 20 engineers, collaborating with designers, product managers and QA specialists.
- Played a key role in building a custom multimedia player using Canvas API and WebRTC, enabling real-time streaming, multi-layer annotations, and embedding into third-party platforms.
- Helped develop an interactive audio/video editor that allows users to edit multimedia tracks add overlays and generate training content directly in the browser.
- Led implementation of SCORM and xAPI standards for detailed tracking of learner progress and interactions within external LMS platforms, ensuring e-learning compliance.
- Integrated AI APIs to enable features such as AI avatars, text-to-speech, and interactive video generation, improving automation and personalization.
- Directed FE modernization by refactoring the codebase into a reactive programming architecture using reactive approach and upgrading to the latest React and TypeScript, improving maintainability and performance.
- Enhanced testing by increasing unit test coverage and adding automated tests integrated into CI/CD pipelines for reliable, faster releases.
- Mentored junior developers, supported onboarding and promoted best practices within the team.

Web Developer / Technical Team Lead | Outsource / Dedicated Team, DigitalSuits | Software Development, Kharkiv, Ukraine

April 2019 to March 2020

- Developed an admin panel for managing an interactive chatbots (before active AI agent integrations) used in B2B insurance applications, enabling business users to configure flows, monitor interactions and manage customer communication scenarios.
- Developed a real estate platform tailored for the UK market, providing tools for property listing management, search and client interactions, with a focus on scalability, performance and regulatory compliance.
- Led the development of several web applications from scratch in a cross-functional team of 5 engineers, working in close collaboration with product management and DevOps engineers to ensure smooth delivery, infrastructure readiness and alignment with business priorities.
- Defined and implemented effective team workflows, including task breakdown, prioritization, code review processes and release planning.
- Conducted effort estimation for features and overall project scope, balancing delivery timelines with technical feasibility.
- Designed the overall application architecture, selected the technology stack and was responsible for key technical decisions throughout the project lifecycle.
- Maintained daily communication with business stakeholders, ensuring alignment between technical implementation and product goals.
- Provided technical mentorship, with a strong focus on FE quality, helping coworkers to improve code maintainability, performance and UI consistency.

WEB & Mobile Developer | Outstaff, Code & Care, Kharkiv, Ukraine

October 2017 to March 2019

- Designed and developed web and mobile applications from scratch, covering architecture on FE and BE parts.
- Participated in application complexity assessment, effort estimation and architectural planning to ensure scalable and maintainable solutions.
- Acted as a mentor for junior developers, supporting their growth through code reviews, technical guidance and onboarding sessions.
- Created a real-time monitoring platform for medical sensors for French market, enabling continuous tracking and alerting based on live data streams.
- Built and maintained cryptocurrency platforms and wallets, with a strong focus on security, performance and scalability.
- Closely collaborated with core teams of crypto platform Bitfinex (<https://www.bitfinex.com/>) to deliver high-impact features, implement landing pages and mobile applications and ensure protocol compliance.

WEB Developer | Outsource / Dedicated team, LANARS, Dnipropetrovsk, Ukraine

October 2016 to September 2017

- Worked as a Full-Stack Developer, delivering both FE and BE solutions across several commercial projects.
- Participated in project planning and estimation, providing accurate assessments of required development hours.
- Took part in technical discussions and feature breakdowns with team members and stakeholders.
- Built responsive landing pages for various products with a focus on performance and maintainability.
- Developed backend APIs for mobile applications, including a pet walking service and a marketplace platform.
- Implemented an admin panel for a marketplace and a CRM system for a gaming company, enabling operational teams to manage content, users and workflows.

Professional Training

JS Course, Binary Studio Academy

July 2016 to September 2016

Education

State University of Economics and Technology

Master's degree in Computer Software Engineering, September 2022 to January 2024

Kryvyi Rih National University

Bachelor's degree in Computer Software Engineering, September 2012 to June 2016

Areas of Expertise

- | | | | |
|------------------|--------------|--------------|-----------------|
| • JavaScript | • TypeScript | • Git | • React |
| • CSS | • HTML | • MongoDB | • Jest |
| • Playwright | • GraphQL | • REST API | • MySQL |
| • Node.js | • RxJS | • Figma | • Docker |
| • Docker Compose | • AWS | • Heroku | • Python |
| • Go | • RabbitMQ | • Redis | • Nginx |
| • Django | • FastAPI | • Express | • Angular |
| • Vue | • Redux | • Webpack | • Vite |
| • WebRTC | • Firebase | • WebSockets | • gRPC |
| • Swagger | • Tailwind | • Bootstrap | • Material UI |
| • Bash | • Redux Saga | • Expo | • Konva |
| • PostgreSQL | • SQLite | • CI/CD | • Microservices |
